(EN) Do I want to install a software or a specific version in a computer classroom?

I want to install a software or a certain version in a classroom.

Any software or version that you want to have available in any classroom must meet the following requirements:

- Have sufficient licenses for the required machines.
- If the software is not available through the University's software repository (https://software.uv.es), you must provide an ISO image or a DVD copy or similar.

In any case, the installation of a specific software or version will also be subject to the legal, licensing, technical and compatibility requirements necessary for this application to be functional and not to interfere negatively with others already installed.
