A new theme based on the main theme of Moodle "Boost" has been installed with which the appearance of Virtual Classroom is customized.
The main advantage of this issue is accessibility and its adaptability to any type of device (mobile, tablet, PC, etc.)
The new features that we find are:
The user's name disappears from the navigation bar and appears when the mouse pointer is positioned over the photo.
New fonts, colors and icons that significantly improve accessibility principles.
Improved responsive versions that adapt the Virtual Classroom to any type of device used.
Another notable improvement is the folding / unfolding of the blocks.
The blue and white color alternate to distinguish the subjects of the "Dashboard" or the sections within a course.
